

DESCRIPTION

Marine jet-cowl explosion-proof fans WGJ-Ex are destined for extraction of air containing explosive vapors or dusts from hazardous spaces of seagoing ships of unrestricted cruising area. They are provided with flame-proof motors of EExd class determined by IMO Class of dangerous substances that are expected in conveyed air. Fan housing is made of steel and provided with drilled flange as well as wire mesh 13x13mm on the top. On the housing in way of impeller a brass ring is fitted. A radial gap between fan housing and impeller blade edge is 2-13mm depending on motor shaft bearing diameter. Fan impeller is made of sea-water aluminum alloy AK11 (silumin). Impeller blades are screwed to the hub, impeller is dynamically balanced. Fan motor is executed as marine, induction, squirrel cage, three-phase, totally enclosed, IP56. It is suitable for 50 or 60Hz installation, flameproof, EExd class. Surface treatment – hot-dip galvanized. Diagrams available on request.

MARKING

Example: WGJ-Ex type fan of nominal diameter DN=630mm, with 440mm impeller hub diameter, with 45° impeller blade angle: WGJ 630/440-45°-Ex
